

# GIT

## Create Directory on GitHub

## Initialize Git On Local Directory

1. Go To Desired Directory First
2. Open Git Bash Then `git init`

## Connect Remote Origin With the local Directory

```
git remote add origin https://github.com/pronazmul/my-test.git
```

## Add all changed to Stage Platform

```
git add .
```

## Once Your are done with your project Then finalize By Commiting

```
git commit -m "Described Message"
```

## Push to Remote Origin From Local Directory

```
git push -u origin master
```

 (first-time only)

```
git push
```

 for next changes after first time.
